T51-SERIES BALLAST COMPATIBILITY

This list is based on testing performed using a stable AC power supply under laboratory conditions, which may not be representative of particular end-use conditions. While each ballast model listed has undergone testing, some may have undergone revisions that may change operating parameters and impact lamp performance

Applications and conditions of use are many and varied and beyond Premise LED's control, so users should make their own determinations as to the suitability of a lamp-ballast combination for their own particular application and use. Compatibility may also extend to ballasts beyond this list, therefore, performing an on-site test before installation is recommended.
